Realise the Potential

Today, more people listen to more music than ever before... And they want it on demand - anytime, anywhere.

Their needs are met by portable and multimedia devices such as iPods, tablets, notebooks and mobile phones. But although the available technology brilliantly provides ever-improving user interface, it still fails to offer the sound quality to match. Vertere knows, this needn't be the case.

The New Generation Pulse D-Fi cable has been updated to enhance and unearth an audiophile performance from mass market digital devices. Working seamlessly across all platforms and beyond to hi-end audio products, the New generation D-Fi cabled breaks down barriers and makes pure high performance audio quality available to all.

"The Pulse-D-Fi is the best-sounding
USB cable we've heard so far. Cables
don't change music, but the best ones
allow purity of transmission and
the Pulse all over."

"A top-level, must-audition cable"

"This is perhaps the single most important
cable Hi-Fi+ has ever reviewed. That's a pretty
bold statement, but it's true, because the D-Fi
is not so only a cable - it's a generation gateway."

"I've been using D-Fi USB for some time
